### Introduction

After posting solid gains in 2000, the Saskatchewan economy contracted in 2001. A global economic slowdown led to reduced demand for Saskatchewan's natural resources. In September, events on the world stage unfolded that caused fear and uncertainty, dampening consumer and business confidence. At home, a poor growing and harvest season forced many Saskatchewan farmers to draw upon their existing inventories of grains. This, combined with soft global demand for our natural resources, led to the largest year of economic contraction since 1992.

While the common thought may be that the Saskatchewan economy is in poor shape, current indications are that the economy has rebounded in 2002. The recession predicted in the United States, Saskatchewan's largest export market, did not turn out to be as severe as initially thought. A strong fourth quarter in 2001 helped the US economy post a positive, albeit small, annual real GDP growth rate of 0.3 percent in 2001. The momentum carried forward into 2002. Despite what appears to be a jobless recovery in the US, the most recent data shows an annualized third quarter growth rate of 4.0 percent.

In Canada, the recovery has been solid. There has been a boom in residential construction, exports have picked up throughout the year, and employment growth has been strong. The anticipated slowdown in late 2001 and 2002, given the weak American economy and the fallout from 9/11, did not materialize. Canada saw a strong fourth quarter in 2001, resulting in a 2001 growth rate of

1.5 percent. The economy has cooled slightly in the latter half of 2002, but the most recent Statistics Canada data indicates the Canadian economy grew at an annualized rate of 3.1 percent in third quarter.

Both these facts are good news for Saskatchewan. As a result of improved economic conditions in our export markets, private forecasts of 2002 real GDP growth in Saskatchewan run between 2 and 3 percent. Indeed, current statistics provide evidence of increased economic activity in the province. Employment is near record levels and the oil and gas and mining sectors continue to thrive. Several other key economic indicators - such as new vehicle sales, retail sales and housing starts - all indicate a recovery is underway.

However, agriculture faced yet another tough year in 2002. This year's harvest is expected to be one of the worst on record and farm cash receipts have fallen in 2002. Tough times in the agriculture sector will undoubtedly spill over into other industries and dampen what might have been a healthy expansion.

## Employment Near Record Levels

Employment growth has been impressive so far in 2002, erasing the job losses experienced in 2001. The most current labour force statistics show that total employment in Saskatchewan was 489,000 in November. This is an increase of 24,400 jobs since November 2001.

Through the first eleven months of 2002, employment has averaged 481,800, an increase of nearly 8,300 jobs year-to-date. The annual average employment in 2001 was 472,300. If 2002 ends at these levels, it would be the second-highest average annual employment level on record.

Of the employment growth witnessed through November 2002, industries in the services-producing sector have led the way. Retail trade has seen an average increase of 5,100 jobs year-to-date. Health care and social assistance has seen employment grow by 3,200 jobs, while educational services have grown by 2,400 positions on average. Several other service-providing industries have seen employment gains as of November.

However, not all industries engaged in services have added jobs. Average employment in the transportation and warehousing industry has seen a decrease of nearly

1,300 jobs. In public administration, job loss has averaged 900 positions, while the wholesale trade sector has seen a decrease of 700 positions.

In the goods-producing sector, average employment is down 2,000 year-to-date. Through November, average employment in the mining and oil and gas sector has decreased 1,200 from the same time period last year. Agricultural employment has averaged 51,000 thus far in 2002, a decrease of 1,100 over the same eleven months in 2001. On the bright side, the utilities and construction industries have added approximately 500 and 900 positions, respectively.

Saskatoon has seen employment average 119,500 through the first eleven months of the year, an increase of 3,700 over 2001 levels. In Regina, average employment has grown by nearly 3,000 positions year-to-date to stand at 108,000.

Saskatchewan's unadjusted unemployment rate remains one of the lowest in the country. Through the first eleven months of the year, unemployment has averaged 5.7 percent. The national average has been 7.7 so far in 2002. More people are also joining the labour force in Saskatchewan. The participation rate rose from 64.5 percent in January to 68.2 percent in November.

## Mining and Oil and Gas Extraction Still Performing Well

Activity in Saskatchewan's oil and gas fields continues to produce solid results. Through the first eight months of the year, crude oil production estimates stood at 16.1 million cubic metres, a modest decrease of 1.1 percent from the record levels of 2001. Due to higher crude oil prices, as of August, the value of 2002 crude oil sales was 11.1 percent higher than the first eight months of 2001.

Natural gas production estimates were 1.1 percent above last year's figures through August. For the fourth consecutive year, the province has witnessed a record for the number of natural gas wells drilled. As of November, wells drilled stood at 1,725, surpassing the 2001 total of 1,409. The future still looks very promising for this sector. The sale of Crown petroleum and natural gas rights generated \$102.9 million in 2002, the highest annual total in five years.

In the mining sector, 2002 production numbers are still healthy. As of October, potash production was up 4.0 percent over the same ten months in 2001 and sodium sulphate production was up 20.8 percent. Uranium production, however, has declined 6.6 percent year-to-date compared to 2001 quantities.

## Key Economic Indicators Sending Strong Signals

Consumers continue to drive the economy in Saskatchewan despite the difficulties in the agriculture sector. While the outlook for economic growth in the province may have dimmed after the drought of this past summer, strong consumer demand, combined with promising business investment intentions, should result in positive economic gains in 2002 and momentum into 2003.

Buoyed by employment and wage gains, consumers are spending in 2002. In 2001, housing starts fell 5.3 percent, but should rebound in 2002. Through September, there had been 2,134 dwellings started, an increase of 30.9 percent over the same nine months in 2001. Building permits issued remain strong as well. Through October the number of permits issued for all dwelling units in Saskatchewan was 28.3 percent higher than the same time period a year prior.

Not surprisingly, as of October, the value of residential construction building permits was up 26.6 percent year-to-date over 2001 levels. However, weakness persists in the other construction sectors - industrial, commercial and institutional - and the total value of construction permits issued is down 3.3 percent year-to-date.

Sales of new motor vehicles are also up in 2002. As of September, the number of new vehicles sold in Saskatchewan had increased 10.7 percent year-over-year. This is higher than the national average of 9.8 percent. The value of these sales has risen 11.9 percent year-over-year in the first nine months of 2002.

Retail trade numbers in the province are looking very strong so far in 2002, outpacing the national average. Through September, sales in the retailing sector were 7.5 percent higher than the same nine months in 2001. The national average stood at a 6.3 percent increase. In Saskatchewan, all trade groups except men's clothing have seen an increase in sales through the first nine months of 2002.

Manufacturing activity in Saskatchewan appears to be on the rebound. After a slow first half of the year, total manufacturing shipments are down only 0.1 percent year-over-year through September. This is much better than early 2002 numbers: in June, shipments were down 1.9 percent over the same six months in 2001. Within the sector, wood product manufacturing is up 34.9 percent, transportation equipment is up 24.3 percent, computer and electronics has risen by 14.0 percent, and beverage production is up 11.6 percent. Weakness prevails in electric equipment and appliances (down 47.6 percent), chemicals (down 11.1 percent), and clothing (down 9.2 percent).

Finally, investment in Saskatchewan is also poised to post better numbers this year. This year, public and private investment in new capital is expected to be \$6.69 billion, an increase of 5.7 percent over 2001. However, these intentions are lower than initial \$6.91 billion forecast made in the spring of 2002. Retail trade, manufacturing, finance and insurance, education, and housing should all see increases in new construction, machinery and equipment.

## Drought

For the second consecutive year, Saskatchewan experienced drought conditions in most, if not all, of the province. The results have been devastating. Farmers in Saskatchewan are expected to harvest only 13.6 million tonnes of grains in 2002, the lowest levels since 1988. At this level, this year's harvest will be 31 percent below the 2001 crop year, and 45 percent below the 10-year average. The poor harvest is in spite of record levels of seeding. A cool and dry spring put many farmers behind in their planting. Summer growing conditions were hampered by drought and a grasshopper infestation ravaged surviving crops. Finally, late season rains and an early frost delayed and reduced harvests.

## Farm Cash Receipts Substantially Lower

Third quarter farm cash receipts data illustrate the difficulties facing Saskatchewan farmers. The impact of the 2001 drought is being reflected in these numbers. Poor growing conditions in 2001 led farmers to draw down on their existing inventories of grains. As a result, deliveries in the first half of 2002 were substantially lower, and the 2002 drought hastened the problems. Saskatchewan farmers' marketings of grain were 35 percent lower than 2001 levels as of the end of October.

As a result, total cash receipts from January to September have fallen 12.2 percent from 2001 levels, to \$4.2 billion. Crop receipts have declined 11.8 percent through the first nine months of 2002. Barley payments are down 34.2 percent, wheat (excluding durum) is down 22.2 percent and receipts for oats and canola are down 21 and 20.8 percent, respectively.

Livestock receipts in 2002 have fallen only 3.1 percent. Cattle and calves receipts are down 2.4 percent and hog receipts have declined 12.9 percent. The third component of farm cash receipts, program payments, has experienced a dramatic decline from 2001 levels. Program payments reached record levels in 2001 at \$1.0 billion, helping to sustain high net farm cash incomes in 2001. From January to September, payments from insurance programs and aid packages are down 30 percent.

## Inflation

Saskatchewan's inflation rate has been running higher than the national average thus far in 2002. The annual change in the All-Items Consumer Price Index has averaged 2.5 percent (as of October). The Canadian average over the same time frame has been 1.9 percent.

The increase in prices for tobacco and alcohol has averaged 21.2 percent over the first ten months of 2002. Also seeing relatively large increases have been transportation and the recreation, reading and education category.

In the province's two largest cities, inflation has averaged 2.5 percent in Regina and 2.6 percent in Saskatoon through the first ten months of 2002.

# Saskatchewan Economic Accounts

---

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has adopted the Chain-Fisher methodology for calculating Real Gross Domestic Product (GDP). With this release, the majority of the tables presented in the Saskatchewan Economic Accounts are still based on the Laspeyres method of calculating real GDP. However, we have included two additional tables that calculate real GDP using the Chain-Fisher methodology. In the future, we anticipate publishing the full set of economic accounts with this new methodology.

The Saskatchewan Bureau of Statistics has available, upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.

## Saskatchewan Economic Accounts

Saskatchewan Gross Domestic Product (GDP) measures the total value of goods and services produced annually in the province. By removing the effects of inflation, it is possible to measure the volume of output. After adjusting for price changes, Saskatchewan's real Gross Domestic Product decreased by 1.3 percent in 2001 (constant 1997 prices).

In nominal terms, Saskatchewan's GDP also decreased by 1.3 percent in 2001 to \$33,211 million. Personal expenditure on consumer goods and services rose by 3.4 percent. Spending rose by 4.1 percent on durable goods, 4.0 percent on non-durable goods and 3.0 percent on services. Government current expenditure on goods and services rose by 3.4 percent in 2001.

However, total investment decreased by 5.7 percent in 2001. The value of physical change in inventories was negative in 2001. Farm inventories decreased by \$854 million while the value of physical change in non-farm inventories increased by \$237 million.

In 2001, nominal exports decreased by 1.3 percent from 2000 levels. Nominal imports also fell by 1.4 percent in 2001. In real terms, however, exports rose by 1.7 percent and imports fell by 3.5 percent in 2001.

Personal income in Saskatchewan rose by 2.3 percent in 2001. Wages, salaries and supplementary incomes (on a Gross National Product basis) rose 2.9 percent and net income of non-farm unincorporated businesses increased by 3.4 percent. Net income received by farm operators declined 18.5 percent. After subtracting direct taxes, contributions to social insurance plans, and pension plan contributions, personal disposable income rose by 3.3 percent.

Real personal expenditure on consumer goods and services increased by 1.3 percent, government expenditures on goods and services increased by 2.1 percent, while real gross fixed capital formation decreased by 6.7 percent. Final domestic demand for goods and services by individuals, the government and for investment purposes decreased by 0.5 percent in 2001.

This document represents an update to the Saskatchewan economic accounts, released in May 2002. Periodic revisions are common to all economic series, as more comprehensive data is obtained, in order to improve the accuracy, reliability and consistency of the data.
